Message: I believe no growth or at least slow growth should be an option. Who pays for all these studies? Who pays for all the infrastructure necessary for growth? Affordable housing is not feasible unless government decides to subsidize affordable housing widespread . Do we have enough water to support all the growth that's proposed? I Believe Developers drive the need for urban growth boundary expansions. Developers like to build their neighborhoods and have a couple token affordable houses available. Another issue of new construction in the commercial areas. I would like sisters to have a long-term vision of maintaining the western theme of new buildings going up. Thank you for your consideration to these comments. I do love Sisters and Central Oregon.
